Oakland Technical High School

OUSD partners with Intel to create the next generation of innovators

The Oakland Tech Computer Academy helps students develop the computational thinking practices of algorithm development, problem solving, and programming within the context of problems relevant to their daily lives. Students also study interface design, robotics, the limits of computers, societal and ethical issues of software engineering, and more.

“We know that if a subject interests a student, education happens,” said Barbara McAllister, Director of Intel’s Diversity in Technology Fund. “It’s our job to make technology interesting. We believe hands-on, project-based learning in the classroom and exposure to Intel role models and mentors will make a huge difference.”

Oakland Tech Computer Academy Pathway

- 9th Grade - Exploratory Computer Science
- 10th Grade - AP CS Principles 10
- 11th Grade - AP CS Java
- 12th Grade - Capstone Electives/Dual Enrollment

OUSD and Intel are partnering to build a transformational solution that aligns education with the needs of 21st-century workers and citizens. Through computer science and engineering pathways, hundreds of OUSD students will have the opportunity to reach their full potential and help create a better future for all of us.
